The accompanying notes are an integral part of the consolidated financial statements

1. Nature of Operations

Enterprise Oil Limited ("Enterprise" or the "company") incorporated under the Business Corporations Act of Alberta on March 23, 2004 and is publicly traded on the TSX Venture Exchange under the symbol "EON". The company provides energy and construction services to customers in the Alberta region. The company acquired the operating net assets of A.G. Grant Construction Ltd. (AGG) on August 24, 2005 and 100% of the outstanding common shares of Trevor King Oilfield Services Ltd. (TKO) on April 1, 2006.

2. Significant Accounting Policies

These consolidated financial statements have been prepared by management in accordance with Canadian generally accepted accounting principles.

Basis of Consolidation

The consolidated financial statements include the accounts of the company and its wholly-owned subsidiaries A.G. Grant Construction Ltd., Trevor King Oilfield Services Ltd., Enterprise Pipeline Company Inc., ESI Management Inc. and 1204757 Alberta Ltd. All significant inter-company accounts and transactions have been eliminated on consolidation.

Use of estimates

The preparation of consolidated financial statements for a period necessarily involves the use of estimates and approximations which have been made using careful judgment because the precise determination of many assets, liabilities, revenues, and expenses are dependent upon future events. Actual results could differ from those estimates. The financial statements have, in management's opinion, been properly prepared within reasonable limits of materiality and within the framework of the accounting policies as summarized below. The preparation of consolidated financial statements in conformity with Canadian generally accepted accounting principles requires management to make estimates and assumptions that affect the reported amounts of assets and liabilities and disclosure of contingent assets and liabilities at the date of the financial statements, and the reported amounts of revenues and expenses during the reporting period. Accounts receivable are stated after evaluation as to their collectability and appropriate allowance for doubtful accounts is provided where considered necessary. Provisions are made for slow moving and obsolete inventory. Amortization is based on the estimated useful lives of property, plant and equipment, and intangible assets. Stock-based compensation expense is based on estimates of volatility, expected terms and risk free rate of interest. The allocation between goodwill and other intangibles of the excess of purchase price over fair value of tangible assets is based on preliminary assumptions and estimates that may change as final assessments of the acquired companies are completed. There are no changes to the allocations as at March 31, 2007.

These estimates and assumptions are reviewed periodically and, as adjustments become necessary they are reported in earnings in the periods in which they become known.

Financial Instruments

All significant financial assets and liabilities and equity instruments of the company are either recognized or disclosed in the financial statements together with other information relevant for making a reasonable assessment of the future cash flows and interest rate, currency or credit risk.

Segments

Management regards the current activities of the company as being conducted in one business segment, that being energy and construction services. All activities and equipment of the company are located in one geographical segment in Alberta. Accordingly, no segment disclosure has been provided in these consolidated financial statements.

Cash and cash equivalents

Cash and cash equivalents include balances with banks and short-term investments with maturities of three months or less.

Investments
Investments are valued at the lower of cost and market value with any other than temporary declines in value being recognized in earnings of the period.

Revenue recognition
Revenue from long-term contracts is recognized on the completed contract basis. Revenue is recognized when the job is substantially completed. Any amounts invoiced prior to completion are recorded as unearned revenue and related costs as work in progress inventory.

Inventory
Raw materials, parts and supplies inventory are valued at the lower of cost and replacement cost. Cost is determined using the first in, first out basis method. Work in progress inventory is valued at the lower of absorption cost and net realizable value. Absorption costs include direct labour, direct materials and related variable and fixed overhead pertaining to the jobs in progress.

Goodwill
Goodwill represents the excess of purchase price over the fair market value of the net tangible and identifiable assets acquired, is recorded at cost, less any provision for permanent impairment. Goodwill is not amortized. Instead, goodwill is tested for impairment on an annual basis. The company assesses impairment based on the estimated undiscounted future cash flows from operations. Impairment of goodwill is measured by comparing its book value against the consolidated estimated undiscounted future cash flows, and any permanent impairment is included in the current period earnings.

Property, plant and equipment
Property and equipment are recorded at cost. Property, plant and equipment are amortized over their estimated useful lives using the straight line method at the following rates, commencing the month of acquisition:

Buildings	240 months
Office furniture and equipment	60 months
Computers and communication equipment	48 months
Small tools and equipment	36 months
Light automotive equipment	60 months
Heavy automotive equipment	60 months
Construction equipment	120 months

Leasehold improvements are amortized over the remaining term of the lease.

The company reviews its property, plant and equipment for impairment whenever events of changes in circumstances indicate that the carrying value may not be recoverable. Impairment is recognized when the carrying amount of an asset is greater than its fair value. The impairment is measured as the difference between the carrying value of the asset and its fair value calculated using the market prices, appraisals and undiscounted cash flows.

Long-lived assets
Long-lived assets consist of property, plant and equipment, deferred acquisition costs and deferred financing costs. Long-lived assets held for use are measured and amortized as described in the applicable accounting policies. The company performs impairment testing on long-live assets held for use whenever events or changes in circumstances indicate that the carrying value of an asset, or group of assets, may not be recoverable. Impairment losses are recognized when undiscounted future cash flows from its use and disposal are less than the assets' carrying amount. Impairment is measured as the amount by which the assets' carrying value exceeds its fair value. Any impairment is included in the consolidated statement of income. Discounted cash flows are used to measure fair value of long-lived assets.

Intangible assets
Deferred financing costs are recorded at cost and amortized on a straight line basis over the term of the related debt over four years.

Deferred business acquisition costs are recorded at cost and amortized on a straight line basis over five years.

Future income taxes
The company follows the asset and liability method of accounting for future income taxes. Under this method, future income tax assets and liabilities are recorded based on temporary differences between the financial reporting and tax bases of assets and liabilities and measured using the substantively enacted tax rates and laws that will be in effect when the differences are expected to be either settled or realized. A valuation allowance is recorded for the portion of the future tax assets for which the realization of any value does not meet the “more likely than not” test.

Stock-based compensation / Contributed surplus
The company uses the fair value base method, whereby compensation cost is charged directly to earnings for all stock-based awards granted. The company determines the fair value of the stock options, using the Black-Scholes option-pricing model. The expense is determined on the grant date and recognized on the date the option is saleable without restriction with a corresponding increase to contributed surplus in shareholders’ equity. When stock options are exercised, the proceeds, together with the amount of the contributed surplus, are recorded in share capital.

Earnings per share
Basic earnings per share is calculated by dividing income available to common shareholders by the weighted average number of common shares outstanding during the period.

Diluted earnings per share is calculated using the “treasury method”, which assumes that all outstanding share options and share purchase warrants are exercised, if dilutive, and the assumed proceeds are used to purchase the company’s common shares at the average market price during the period the underlying share options and share purchase warrants were outstanding.

Share issuance costs
Costs related to the issuance of shares are charged against share capital.

Foreign currency translation
Transaction amounts denominated in foreign currencies are translated into their Canadian dollar equivalents at exchange rates prevailing at the transaction dates. Carrying values of monetary assets and liabilities reflect the exchange rates at the balance sheet date. Gains and losses on translation or settlement are included in the determination of net income for the current period.

(a) Marketable Securities

Marketable securities are valued at the lower of cost and market value.

(b) Investments

The company follows the cost method of accounting for its investments in its subsidiary companies.

3. Inventory

	$	994,637

15. Subsequent events

On May 7, 2007, the company acquired 100% of the shares of T.C. Backhoe & Directional Drilling Inc. (TC) effective April 1, 2007. The purchase price for all of the shares of TC was $12,000,000 plus $1,924,000 for additional equipment and inventory, totaling $13,924,000. The purchase price was funded by cash, 1,500,000 common shares of Enterprise Oil Limited at $0.80 per share and a non-interest bearing vendor take back loan of $1,000,000 repayable in equal annual installments over two years.

On April 26, 2007 the company held its annual shareholders' meeting approving the following:

- Audited financial statements for the year ended September 30, 2006.
- Board of Directors was increased to five members.
- Name of the company to change at an unscheduled future date to Enterprise Oilfield Group Inc.
- Stock option plan was amended to reprice $1,495,000 stock options to $0.82 per common share

16. New accounting standards

Financial instruments and other comprehensive income:
New accounting standards will be in effect for fiscal years beginning on or after October 1, 2006 for recognition and measurement of financial instruments and disclosure of comprehensive income. The company is currently investigating the impact of these new standards.

17. Financial instruments

Financial instruments consist of recorded amounts of accounts receivable which will result in future cash receipts, as well as bank indebtedness, accounts payable and accruals, and long-term debt which will result in future cash outlays.

The company is exposed to the following risks in respect of certain of the financial instruments held:

Credit risk

Credit risk arises from the potential that a customer will fail to perform its obligations. The company is exposed to credit risk from customers. However, to mitigate this risk the company regularly reviews customer credit limits.

Fair Value

The carrying values of the financial instruments noted above approximate their fair values.

17. Financial instruments continued

Interest rate risk

The company minimizes its exposure to interest rate risks by securing financing with a fixed interest rate for some of its capital asset acquisitions and limiting its financing terms to less than sixty months.

18. Comparative amounts

Some of the comparative figures have been reclassified to conform to the current six months presentation.

19. Seasonality of operations

A significant portion of the Company's operations relate to the oilfield services and construction segment in Alberta. The Company's earnings follow a seasonal activity pattern of Alberta's oil and gas exploration industry whereby activity peaks in the winter months and declines during the spring thaw. Due to the spring thaw, frost comes out of the ground, which makes roads incapable of supporting heavy equipment resulting in making drilling for oil and gas more difficult. As a result, demand for these type of services generally is the highest in the fall and winter quarters and the lowest in the spring quarter.

20. Revenue recognition

No losses are expected and no unearned revenue exist on long-term contracts, as of March 31, 2007.
